1.2.1 Movement analysis

Dorsi Flexion

Plantar Flexion

Levers

Load

Fulcrum

Effort

Lever Systems

Flexion

Adduction

Abduction

Extension

Rotation

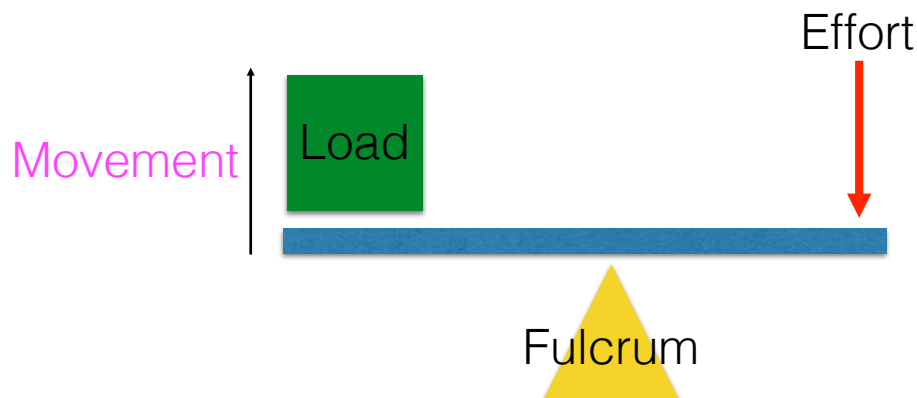

Lever Systems

1. Levers

- ▶ Muscles and bones work together as a series of _____ to create movement.
- ▶ A lever is a **rigid bar** that comprises three components:
 - ▶ _____ (the point at which the lever rotates)
 - ▶ _____ (the resistance applied to the lever system)
 - ▶ _____ (the effort/muscle needed to move the lever system)
- ▶ The **classification of lever** depends on the **order** in which these _____ **components** are in relation to each other.

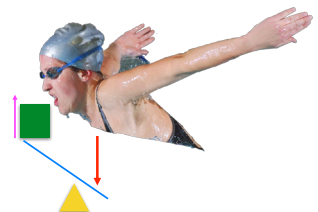

2. First class levers

- ▶ _____ **class levers** are organised in a see saw order to move the load.

- ▶ Examples of first class levers:

- ▶ _____ **the head** e.g. breathing in Swimming or heading in Football.

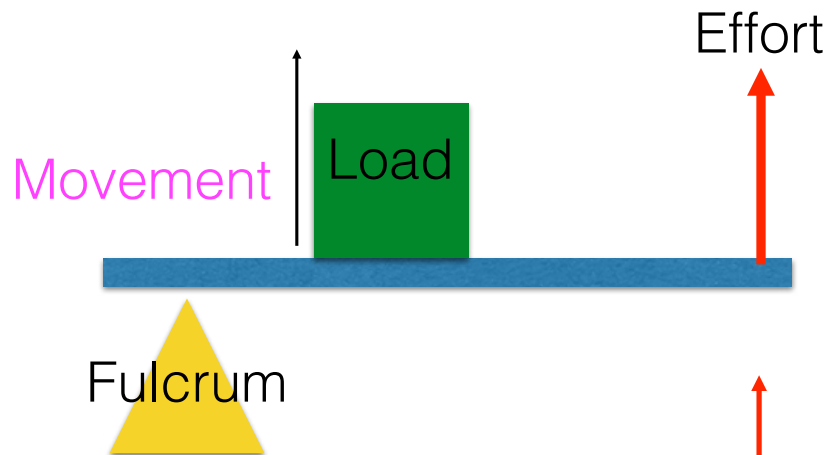

Lever Systems

3. Second class levers

- _____ **class levers** are organised in a wheelbarrow order to move the load.

- Examples of second class levers:

- _____ **up**

4. Third class levers

- _____ **class levers** are organised in a fishing rod order to move the load.

- Examples of third class levers:

- **bicep curl** (effort is where the muscle attaches to the lever)

Lever Systems

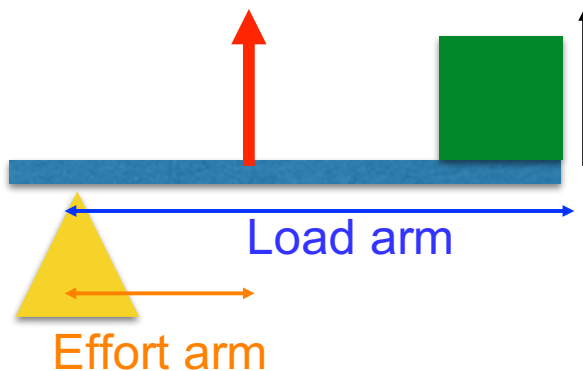

5. Mechanical advantage

- ▶ When a lever's **effort arm is _____** then its _____ arm than it is said to have _____ mechanical advantage.
- ▶ When a lever's **effort arm is _____** than the load arm it is said to have _____ mechanical advantage.
- ▶ **Mechanical advantage = $\frac{\text{effort arm}}{\text{load arm}}$**

1. First class levers - High or low mechanical advantage

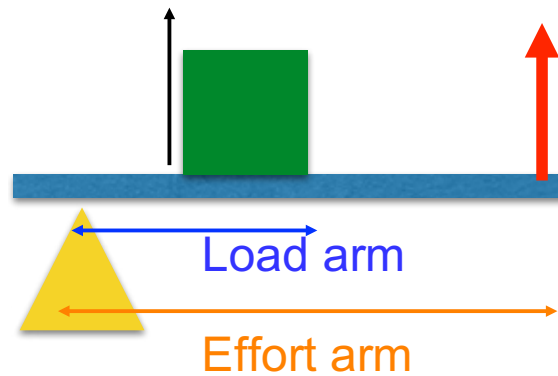

2. Third class levers - Low mechanical advantage

Lever Systems

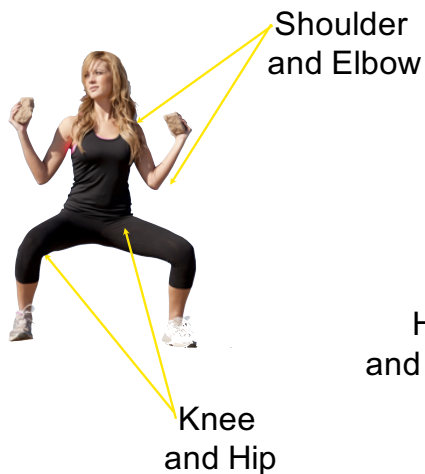

3. Second class levers - High mechanical advantage

6. Range of movement

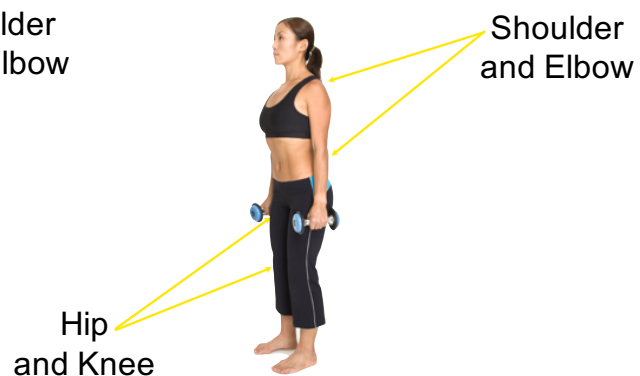

Flexion

Decrease the angle at the joint

Extension

Increase the angle at the joint

Lever Systems

Abduction

Move the limb away from the central axis

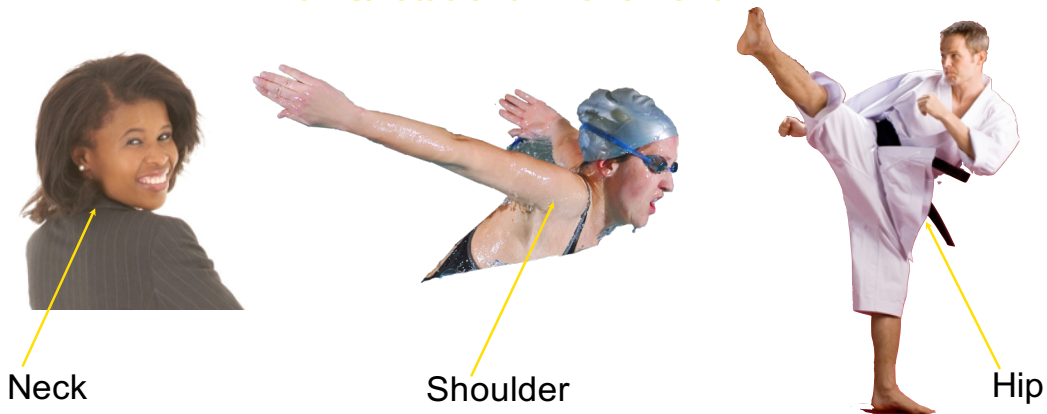

Adduction

Move the limb towards the central axis

Rotation

Movement around an axis/rotational movement

Plantar flexion

Movement at the ankle joint that points the toes

Dorsiflexion /

Movement at the ankle joint that flexes the foot upwards

7. Sporting examples

Tennis serve
involves rotation at
the shoulder

Dancing involves
adduction and
abduction at the
shoulder and hip

Weight lifting
involves dorsiflexion
at the ankle

Jumping involves
plantar flexion at the
ankle
