Goalsetting and SMART targets

1. Goal setting

- ▶ **Goal setting** is a method used to **control** _____, measure _____, **improve** and increase _____.
- ▶ To ensure your goals are effective you should make sure they are **SMART**.

2. SMART targets

S

_____ – The goal should be focused on the specific skill or muscle group or fitness component you want to develop.

M

_____ – The goal should be measurable so progress can be seen and further motivate.

A

_____ – The athlete should accept the goal so there is commitment to training, increasing their motivation to achieve success.

R

_____ – If the goal is too easy or too hard then the athlete will not be motivated. Challenging but realistic targets are best. It should be recorded so progress can be seen

T

_____ – Having a date to aim for focuses the athlete to achieve their goal in the time provided.
